Sample Collection Date	: 10/Jun/2021 02:54PM
Sample Receiving Date	: 10/Jun/2021 02:54PM
Lab Reference No	: 012106100002
Patient Name	: Mr. ANTIGEN
Age/Sex	: 30 Y/Male
Ref. Doctor/Hospital	: Self
Registration Date	: 10/Jun/2021 02:54PM
Reporting Date	: 11/Jun/2021 11:40AM
Case ID	: bfr123

TEST NAME

COVID-19 RAPID ANTIGEN TEST

SPECIMEN

Nasopharyngeal Swab

TEST PRINCIPLE

LATERAL FLOW IMMUNOCHROMATOGRAPHIC ASSAY

RESULTS

COVID-19 Antigen Detection Test **Negative**

NOTES

1. The test procedure, precaution and interpretation of results for this test must be followed strictly when testing.
2. The test should be used for the detection of SARS-CoV-2 antigen in human nasopharyngeal/throat specimen.
3. If the test result is negative and clinical symptoms persist, additional testing using other clinical methods is recommended. A negative result does not at any time preclude the possibility of SARS-COV-2 infection.

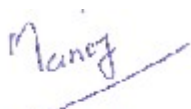

COMMENTS

Coronaviruses (CoV) are a large family of viruses that cause illness ranging from the common cold to more severe diseases such as Middle East Respiratory Syndrome (MERS-CoV) and Severe Acute Respiratory Syndrome (SARS-CoV). 2019-nCoV is a new strain that was discovered in 2019 and has not been previously identified in humans. Common signs of infection include respiratory symptoms, fever, cough, shortness of breath and breathing difficulties. In more severe cases, infection can cause pneumonia, severe acute respiratory syndrome and kidney failure.
